January 20, 2017

Assemblyman Ken Cooley, D-Rancho Cordova, looks over a fallen tulip tree at Capitol Park Thursday, Jan. 19, 2017, in Sacramento. The nearly 90-foot tree was from an historic grove honoring Civil War veterans. It was among three from the 120-year-old grove that was destroyed during the storm that swept through Northern California Wednesday.

Saturday

Mainstem Forecast River Flooding

Forecasts are based on current precipitation forecasts out through early Tuesday morning next week. Forecasts are subject to change based on changes to the precipitation forecasts.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

The second in a series of Pacific storms is passing through Northern California this morning with moderate to heavy precipitation and southerly gusts of 40-60 mph. The cold front associated with this storm will exit the eastern areas this afternoon. Snow levels started out around 3000 ft. in the north and 5000 ft. in the south, but are dropping to 2000-4000 ft. and locally lower behind the front. Cool, wet, unstable conditions behind the front will lead to numerous showers in the mountains and scattered showers in the valleys later today through Saturday. Isolated thunderstorms are also possible just about anywhere in the region as well.

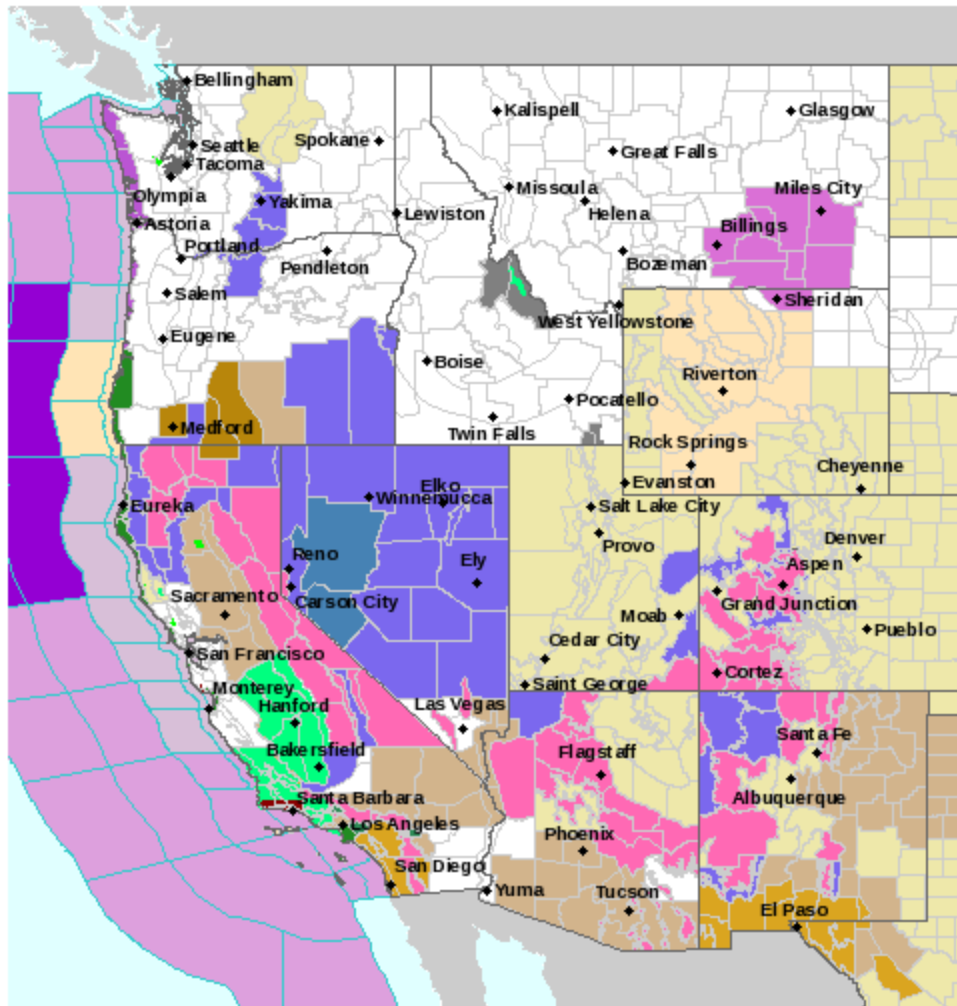

The next storm will arrive early Sunday with southerly gusts to 40-60 mph and snow levels near 4000-6000 ft. in heavy precipitations. Snow levels will drop Sunday afternoon to 2500-4000 ft. once the front moves through. Scattered showers will continue later Sunday through early Tuesday in the colder air mass behind the front. The problem of soft, saturated soils will continue to make downed trees possible. Area water courses will again run rather high as well.

At this time it looks like a stretch of mild and dry weather with occasional offshore winds will begin by late Tuesday and last into early February.

SOUTHERN CALIFORNIA

The second in the series of three storms slated to impact the state is pushing through the area early this morning. At the current time, the heaviest rain is occurring along the Sierra Foothills southward to Santa Barbara and Ventura Counties. This storm is being driven eastward at 25-35 mph and expect most of the heavy rain to occur during the morning to early afternoon hours. Cold air aloft will allow snow levels to remain around 5,000 feet. A few thunderstorms will be possible this afternoon, mainly over Central California. Expect rainfall rates to reach a third of an inch per hour during the passage of the front. Strong south winds of 20-35 mph will also develop later this morning into the early afternoon hours. In all, expect 1-2 inches of rainfall with this second storm with local amounts close to 3" on south aspects. Over a foot of snow will fall in the Sierras with most of the Southern California mountains seeing 5-10". The precipitation will end this evening. After a break in the rainfall Saturday, the third, and strongest, storm will arrive Sunday. Heavy rain will occur along the central coast prior to daybreak with heavy rain reaching Southern California late Sunday morning. Gusty west winds and intense rainfall can be expected for a 3-5 hour period Sunday during the passage of a cold front. Storm total rainfall from the third system may be 2-5" with the heaviest amounts on south and west aspects of Southern California. This rainfall will likely trigger mud and debris flows near recently burned areas. The snow level will rise to 7,000 feet Sunday. The rainfall should taper to showers for Sunday night through Monday. Cool, windy weather will follow Tuesday. Sunny, drier and warmer weather will return beginning next Wednesday.
